Empathize & Discover

Date	13 July 2026
Team ID	
Project Name	Food Delivery Analysis using Tableau
Maximum Marks	4 Marks

Empathy Map Canvas:

An empathy map is a simple, easy-to-digest visual that captures knowledge about a user's behaviours and attitudes.

It is a useful tool to help teams better understand their users.

Creating an effective solution requires understanding the true problem and the person who is experiencing it. The exercise of creating the map helps participants consider things from the user's perspective along with his or her goals and challenges.

Example:

Example: Food Ordering & Delivery Application

Our Empathy Map Canvas: Food Ordering Application User

Primary user persona: **Restaurant Manager / Business Analyst** who wants to analyze food delivery data to improve business performance, understand customer ordering behaviour, monitor delivery efficiency, and make informed decisions using interactive dashboards.

THINKS - How can I identify the most popular cuisines and meal types? - Which cities generate the highest number of food orders? - Are delivery times affecting customer satisfaction? - How can business insights help improve operational efficiency? - How can I monitor revenue trends effectively?	SEES - Large datasets containing thousands of food delivery records. - Customer orders spread across different cities and cuisines. - Various meal types with different order volumes. - Different delivery times and customer ratings. - Business reports that are difficult to interpret without visualization.
SAYS "I need a dashboard that summarizes all business metrics."	DOES - Collects food delivery data. - Cleans and prepares the dataset.

• "I want to compare revenue and customer behaviour easily." • "Interactive filters would help me analyze data faster." • "Visual reports are easier to understand than spreadsheets." • "Business insights should support better decision-making."	• Uses Tableau dashboards to analyze trends. • Filters data based on city, cuisine, and meal type. • Reviews business insights to improve performance.
PAINS • Large datasets are difficult to analyze manually. • Revenue trends are not immediately visible. • Customer ordering patterns are hard to identify from raw data. • Delivery performance cannot be evaluated efficiently using spreadsheets. • Manual reporting takes significant time and effort.	GAINS • Interactive dashboards simplify business analysis. • Tableau Stories present insights in a structured manner. • KPI cards provide quick performance summaries. • Interactive filters improve data exploration. • Better understanding of customer ordering behaviour and delivery performance.

User Needs

- A centralized dashboard for food delivery analysis.
- Interactive visualizations for business metrics.
- Revenue and delivery performance analysis.
- Customer ordering pattern analysis.
- Easy access to Tableau dashboards through Tableau Public and Flask web integration.

Opportunities

- Identify popular cuisines and meal types.
- Analyze revenue contribution across different meal categories.
- Compare city-wise food ordering behaviour.
- Monitor delivery performance using interactive visualizations.
- Support business decision-making through data-driven insights.
- Expand the project in the future with predictive analytics and machine learning.
