

Project Performance Testing

Date	13 July 2026
Team ID	
Project Name	Food Delivery Analysis using Tableau
Maximum Marks	

Model Performance Testing:

S.No.	Parameter	Screenshot / Values
1.	Data Rendering	The Food Delivery Analysis dataset was successfully imported into Tableau. The dataset contains 50,000 records and 19 columns, including Order ID, Customer Age, Cuisine Type, Meal Type, Company Type, City, Customer Rating, Delivery Time, Restaurant Type, and Order Value. All records were loaded successfully and verified before visualization. 
2.	Data Preprocessing	The dataset was checked for missing values, duplicate records, and incorrect data types. Data consistency was verified across important attributes such as Cuisine Type, Meal Type, City, Customer Rating, and Delivery Time. A calculated field was created to classify customers into Age Groups (Child, Gen Z, Millennial, Adult) for better business analysis. 

3.	Utilization of Filters	Interactive filters were added to improve dashboard usability. Users can filter the dashboard by: - City - Meal Type - Cuisine Type - Company Type - Restaurant Type These filters enable dynamic exploration of customer ordering behaviour and business performance.
4.	Calculation fields Used	Calculated Field: Age Group Logic: - Age $\leq$ 20 → Child - Age 21-30 → Gen Z - Age 31-40 → Millennial - Age > 40 → Adult Purpose: This calculated field groups customers into meaningful age categories, making it easier to analyze ordering behaviour across different customer segments.
5.	Dashboar d design	Food Delivery Analysis Dashboard developed using Tableau Public 

6.	Story Design	A Tableau Story was created to present business insights in a structured manner. The story consists of five pages: • Business Overview • Revenue Analysis • Delivery Performance • Customer Ordering Pattern • Final Business Insights The story enables users to navigate through different analyses and supports data-driven decision-making.
