

Restaurant Manager — Analytics Dashboard Journey

Project Overview

Project Title	Food Delivery Analysis using Tableau
Repository	Food-Delivery-Analysis-Tableau
Website	Flask web application with an embedded Tableau Dashboard and Tableau Story

Project Description

The project analyzes **50,000 food delivery records** using Tableau to generate meaningful business insights through an interactive dashboard and Tableau Story. The dashboard is published on Tableau Public and integrated into a Flask web application for easy accessibility.

The dashboard includes:

- KPI Dashboard
- Revenue Analysis
- Customer Rating Analysis
- Cuisine Analysis
- Meal Type Analysis
- City-wise Order Analysis
- Delivery Performance Analysis
- Customer Age Group Analysis
- Interactive Filters

The objective of the project is to help restaurant managers and business analysts understand customer ordering behaviour, monitor business performance, and support data-driven decision-making.

Customer Persona

Primary User	Restaurant Manager/ Business Analyst
Age	35-45 years
Occupation	Restaurant Manager/ Business Analyst
Experience	Responsible for monitoring restaurant performance, customer ordering behaviour, delivery operations, and business growth using analytical reports.

Goals

- Understand customer ordering behaviour.
- Monitor revenue trends.
- Analyze delivery performance.
- Identify popular cuisines and meal types.
- Evaluate city-wise order distribution.
- Improve business performance through data-driven decisions.

Challenges

- Large amounts of food delivery data.
- Difficulty identifying trends using raw datasets.
- Time-consuming manual reporting.
- Limited visibility into customer behaviour and revenue patterns.
- Difficulty comparing performance across cities and meal types.

Dashboard Analytics Journey — Five Stages

Dashboard Analytics Journey – Five Stages

Project Title
Food Delivery Analysis using Tableau

Repository
Food-Delivery-Analysis-Tableau

Website
Flask Web Application with an Embedded Tableau Dashboard and Tableau Story

Primary User
Restaurant Manager / Business Analyst

Goal
Make data-driven decisions to improve business performance and customer satisfaction

STAGE	 1. Business Overview	 2. Revenue Analysis	 3. Delivery Performance	 4. Customer Ordering Pattern	 5. Final Business Insights
 USER ACTIVITY	Opens the dashboard and reviews KPIs and overall business performance.	Examines revenue trends across meal types and categories.	Reviews delivery time, order volume, and delivery efficiency metrics.	Analyzes customer preferences, cuisine demand, meal types, and city-wise orders.	Reviews summarized insights and key takeaways from the Tableau Story and dashboard.
 EXPERIENCE	Gains a clear overview of total orders, revenue, customers, and key metrics.	Identifies top-performing meal categories and revenue opportunities.	Understands delivery efficiency, average delivery time, and performance trends.	Identifies customer trends, popular cuisines, peak ordering hours, and behavior patterns.	Uses data-driven insights to support strategic business decisions.
 TOUCHPOINTS	- Dashboard Homepage - KPI Cards - Overall Summary	- Revenue by Meal Type - Revenue by Category - Revenue Trends	- Delivery Time Analysis - Order Volume - Delivery Performance	- Cuisine Analysis - Meal Type Analysis - City-wise Orders - Customer Age Group	- Tableau Story - Key Insights Page - Download / Share Options
 PAIN POINTS	- Large volume of data - Hard to get quick summary	- Difficulty comparing meal category revenue - Manual calculations	- Inconsistent delivery performance - Long delivery times	- Scattered data - Difficult to identify customer patterns	- Lack of actionable insights - No clear reporting flow
 BUSINESS IMPACT	Quick understanding of overall business health.	Improved revenue tracking and better resource allocation.	Optimized delivery operations and better customer satisfaction.	Better customer understanding and targeted marketing.	Data-driven decisions leading to business growth and efficiency.

Overall Outcome

The dashboard and Tableau story provide end-to-end visibility of food delivery operations, helping the restaurant manager make informed, data-driven decisions to improve performance and customer satisfaction.
